

Accelerated Site Closure Program **Service Company Directory**

Published By:
 **INNOVATIVE**
Well Abandonment

The information contained in this directory was provided by the different service companies that will be providing services for the Accelerated Site Closure Program in Saskatchewan.

This directory is a resource for all the services companies that need a service for any work that you might be doing.

The order of the listings in this directory are based on the order that they were received by the service providers.

Please feel free to forward this directory to any contacts that you have in any oil and gas company as they may be looking for different providers of services also.

If you see any omissions or errors, please let us know and we will correct them.

If you would like to have a listing in this directory, please feel free to reach out to Chris Hamilton at chamilton@innovativewa.com.

Innovative Well Abandonment

11630, Kingsway Ave, Edmonton, AB T5G 0X5

Contact: Scott Bowes - 780-808-1349 or Chris Hamilton - 403-630-1243

Email Address: sbowes@innovativewa.com or chamilton@innovativewa.com

Website: <https://innovativewa.com/>

Services Provided: Innovative Well Abandonment provides Ultra High Pressure Water Jet Cutting services. Wellhead cut and caps will be our focus for the ASCP, and with our dual cutting head technology, we will be able to cut and caps up to 50% faster with minimal ground disturbance.

Geographical Areas You Plan to Cover: Innovative Well Abandonment will be working right across Saskatchewan.

Prime or Sub-contractor or Both: Both, but we will only be prime if it makes sense.

BA ID: 36898

ASCP Services Provided:**Well Decommissioning:**

- Fluid Hauling and Disposal
- Cut and Cap

Contact: Donald Jameson

Phone Number: Cell: 1-780-522-991 | Bus: 306-825-4166

Email Address: donald.jameson@fortuneoilfield.com

Website: www.fortuneoilfield.com

Services Provided:

Fortune Oilfield Construction (Fortune) was incorporated in 2008. We are based out of Lloydminster, Saskatchewan. With years of experience, Fortune has focused on providing and continuously improving our people, systems, and commitment to be the best Civil Construction company in the industry able to deliver certainty to our clients, recognizing their needs and delivering positive results.

Fortune is an industry leading company supplying various construction services to the Energy, Industrial, and Real Estate Development Industries. We offer a wide variety of construction services that include, but are not limited to Project Management, Construction Supervision, Estimating, Civil Construction, Earth Works, Concrete work, Grout work, Site and Facility Maintenance, Infrastructure, General Construction, Reclamation, and Trucking/Hauling.

Our willingness and abilities have given us the incredible opportunity to showcase our discipline and attention to detail over the years in a vast array of projects. We listen to our clients and have a reputation for completing work responsibly, fairly, and Safely.

Geographical Areas You Plan to Cover: All of Saskatchewan

Prime or Sub-contractor or Both: Both

Plains Environmental Inc.

Melville SK, & Willmar, SK

Contact: Scott Tether, Melville & Dale Schmidt, Willmar

Phone Number: Scott Tether, 306-728-7076 & Dale Schmidt, 306-539-4380

Email Address: stether@plainsenviro.com & dschmidt@plainsenviro.com

Website: plainsenvironmental.com

Services Provided:

Waste Processing Facilities

At Melville: Cavern disposal of upstream and downstream oilfield wastes, industrial wastes, and NORM

At Willmar: Upstream oilfield wastes, hydrovac mud, produced water, drilling mud, workover and turnaround fluids and slurries.

Geographical Areas You Plan to Cover:

At Melville: Due to our extensive license Melville has received wastes from across Canada. For the ASCP wastes, we would expect that transport costs versus the analytical on the waste will determine our radius of service.

At Willmar: Our usual customer base is SE SK .

Prime or Sub-contractor or Both: Plains Environmental would be a sub- contractor. We do not go to our customer's sites. We do not provide transport services.

BA Code: 08340

ASCP Services Provided:

Remediation/Reclamation:

North Shore Environmental Consultants (NSEC) was established in 2002 upon the principle that a smaller, flexible consulting firm could provide superior client service. We are an employee owned consulting firm that is recognized for our unique company culture and innovative spirit.

There are currently over 100 personnel working for NSEC located throughout the Prairies from our Regina Office, Sherwood Park (Head Office), Lacombe, and Calgary. Client services extend throughout western Canada to Ontario and to US based projects. Our diverse family of professionals includes agrologists, air quality specialists, biologists, ecologists, foresters, hydrogeologists, engineers, planners, GIS experts, AutoCAD technologists, archaeologists and regulatory specialists.

NSEC offers cost efficient and effective solutions to the complex environmental and regulatory challenges faced by today's industries. Our professionals are experienced and deliver results that satisfy the particular needs of both the client and regulators. NSEC draws from a deep resource pool providing our clients with the most comprehensive and cost efficient solutions to their projects. NSEC is proud to offer the following environmental services;

- Environmental Assessment and Regulatory Applications
- Emergency Spill Response
- Fugitive Emissions and Compliance Field Services
- Air Quality and Emissions
- Compliance Reporting
- Corporate Consulting
- Remediation
- Reclamation

NSEC appreciates this opportunity to outline our company background, expertise, and consulting services. Please review the included Statement of Qualifications for additional details regarding our services and expertise. If you have any questions about our services or would like further information, please contact Todd Clouse, Regional Director in our Regina office.

Magnum Cementing Services has been in business for 13 years and specializes in Primary and Remedial cementing.

Magnum has four stations in Saskatchewan- Kindersley, Estevan, Shaunavon and Lloydminster, all stations are equipped with bulk plants. Magnum has a dedicated team of professionals with Petroleum Engineers, Technical programmers, certified lab technicians, and many field personnel with years of experience in cementing across North America and abroad. Magnum

has dedicated Remedial Cementing units and experienced two person crews, the units are also equipped with low rate pumps on board for squeezing.

We specialize and have aided in abandonment projects for many companies in Saskatchewan. Magnum Cementing Services will provide Province wide service.

Website: www.matrix-solutions.com

Services Provided:

Engineering and Project Management

- Project management is an integrated component of Matrix's services on all projects. To provide our clients with high value solutions, Matrix uses proven project management techniques that allow our project teams to streamline their work and effectively integrate technical experts, field personnel, and project managers.

Cut and Cap

- Over the past 5 years, Matrix Solutions Inc. has completed approximately 450 cut-and-cap programs on abandoned oil and gas wellbores. We have a team of qualified reclamation specialists who can either supervise and manage the entire cut-and-cap process or provide on-call environmental consulting services to fulfill any individual component of the program. Having Matrix onsite throughout the cut-and-cap process allows wellbore soil sampling to be completed while the excavation is open; this reduces costs by eliminating return site visits and future ground disturbance costs to collect this data.

Gas Migration and Surface Casing Vent Testing

- Saskatchewan regulations require gas migration and surface casing vent testing to facilitate wellbore abandonment. This process is most efficient when these tests are

conducted before construction equipment arrives onsite, as mobilization time is greatly reduced when these activities are grouped together. Matrix uses a portable methane detector (PMD), manufactured by SENSIT® Technologies to conduct gas migration surveys. This allows us to conduct the testing without the need for ground disturbance.

Phase I Environmental Site Assessments

- Over the past 5 years, Matrix has completed approximately 1,440 Phase I Environmental Site Assessments (ESAs) primarily for upstream oil and gas sites. Matrix has a team of designated personnel who are dedicated to the completion of Phase I ESAs. This team includes qualified and experienced technologists and scientists familiar with commercial and upstream oil and gas Phase I ESAs, liability assessments, as well as reclamation certificate applications and associated regulations. Technical reviewers supporting the Phase I team typically have 10 to 15 years of experience related to Phase I ESAs.

Phase II Environmental Site Assessments

- Over the past 5 years, Matrix has completed approximately 5,800 Phase II ESA projects. For each program, Matrix assembles a team of qualified individuals that considers the site locations, types of facilities, expected contaminants, subsurface conditions, and client-specific requirements. The qualified individuals can include professional engineers, geologists, agronomists, environmental scientists, and environmental technicians.

Detailed Site Assessment

- In the past 5 years, Matrix has completed approximately 485 detailed site assessment (DSA) projects. Matrix's strong team of reclamation professionals work collaboratively with our clients, landowners/occupants, and regulators to ensure that all sites are returned to equivalent land use capability. Due to site-specific conditions, sites require different approaches to achieve equivalent capability. Matrix's reclamation team uses their professional experience and internal standard operating guidelines (SOGs) to evaluate and prepare successful monitoring programs, complete DSAs, and utilize their professional judgment when needed to achieve site closure.

Reclamation/Remediation Regulatory and Abandonment Process Applications

- Remediation
 - Once remediation guidelines are established for a site (generic, modified-generic, or site-specific risk assessments [SSRA] derived), Matrix evaluates all remediation options applicable for the site and their costs. Decision analysis tools have been used to objectively assign relative scores for different remedial alternatives. The remedial options are then discussed with the client and a remediation action plan (RAP) is developed that outlines the detailed scope of work for remediating the site with the chosen approach.

- Reclamation
 - Matrix has completed more than 305 projects related to reclamation/remediation regulatory and abandonment process applications. Matrix has developed internal training on the Acknowledgement of Reclamation (AoR) process which includes technical and document services components. The project manager develops a team for each project by aligning the technical qualifications and experience of the staff with the needs of the program. Senior review by a qualified professional is a mandatory part of the quality assurance/quality control (QA/QC) during the reporting process. Matrix's document services team completes the final administrative review on reports to ensure the necessary documents are attached, and the AoR package is complete. To date, our AoR success rate is approximately 99%.

Indigenous Relations

- Matrix is committed to working with Canada's Indigenous communities to build mutually beneficial relationships, recognizing that both parties are accountable for joint success. This commitment is one of our key corporate initiatives, and we have committed significant resources to ensure its success. Over the last 7 years, Matrix has engaged local community members and businesses, not only to support Indigenous communities, companies, and economies, but also to facilitate logistics, create goodwill, and positively influence the public perception of projects by increasing understanding and awareness.
- Mentorship and Environmental Training Environmental projects are good opportunities to engage and train community members through Matrix's Indigenous Monitoring and Environmental Training (MET) program. The Matrix MET program is designed to spark interest and provide mentorship and training in environmental sciences to members of Indigenous communities to prepare for future employment opportunities as environmental inspectors/monitors as well as to build community capacity for engagement and inclusion in project development. This is accomplished by presenting short courses and/or demonstrations that provide introductory skills in core disciplines of the environmental profession, combined with field experience.

Website: www.rrec.ca

Services Provided:

Ram River Environmental Consultants Ltd. (RREC) is a professional environmental consulting company that provides reclamation program management and project supervision for upstream oil and gas clients in Alberta and Saskatchewan. Our services include Phase 1 and Phase 2 Environmental Site Assessments, remediation planning and supervision, reclamation supervision, detailed site assessments and reclamation certificate applications. We also provide direct support to operations and emergency spill response services.

We seek to hire local people who want to live and work long term in the communities where we operate. Having local people regionally based helps to build relationships in those communities and lends to managing time and weather sensitive work. RREC has professionals from several different scientific backgrounds, allowing us to complete complex projects in any given setting or contaminant scenario. Included are professionals from the field of agronomy, forestry, hydrogeology, risk assessment, chemistry, biology, and geology among other disciplines. RREC also employs staff hydrogeologists with experience developing and implementing groundwater assessment work plans, conducting pathway elimination and developing site specific Tier 2

guidelines, if required. Applying Tier 2 guideline strategies has reduced remedial volumes that require excavation and subsequently resulted in significant cost savings.

The result is a cost efficient and effective response to environmental challenges to minimize the environmental impact of production operations and projects. RREC employs local contractors to complete any required third party service. RREC also encourages our staff and their families to engage in volunteerism and to take leadership roles in our communities. Our people support and volunteer for a variety of local organizations.
